Q&A

BARAM on GitHub

N NEXTFOAM

BARAM is a Free Open Source Computational Fluid Dynamics (CFD) software package. *BARAM* is developed to mitigate the steep learning curve of Text-based Solvers. *BARAM* helps you focus on a problem itself with intuitive graphical user interface. For now, *OpenFOAM®* solvers modified by *NEXTFOAM* are integrated into *BARAM*. *NEXTFOAM* develops and releases it under GNU Public License (GPL).

"BARAM" (pronounced like 'baa-laam') is a Korean word that means "wind".

BARAM package has two applications, *BaramFlow* and *BaramMesh*. *BaramMesh* generates mesh for calculation, and *BaramFlow* calculates fluid dynamics with that mesh.

Source code of *BARAM* is published on GitHub, and *BARAM* supports following platforms.

```
* Ubuntu 20.04 or later

* CentOS 8.2 or alternatives ( Rocky Linux, AlmaLinux, ... )

* OpenSUSE Leap 15.4

* Linux Mint 21 "Vanessa"

* Windows 10 or later

* macOS 10.14 or later (Apple Silicon only)
```

For installation from the source code, please refer to Installation page.

Binary installation package for 64-bit windows and disk image for macOS with Apple Silicon are here for convenience.

Download BARAM v24.3.3 Installer for 64-bit Windows ›

NOTE: For macOS, *open-mpi* Homebrew Formula should be installed in advance.

Download BARAM v24.2.0 Disk Image(dmg) for macOS with Apple Silicon ›

This site uses Just the Docs, a documentation theme for Jekyll.
